DEFINITIONS OF ENVIRONMENTAL PROTECTION RESEARCH

These definitions, developed cooperatively by the Smithsonian Science Information Exchange and the Environmental Protection Agency, were used in the preparation of the Environmental Protection Research Catalog.

1. Air Quality
   - A. Emission Sources
     Research concerned principally with sources of air pollution including types, industries, materials, and processes.
   - B. Effects – Human
     Medical and epidemiological studies; laboratory animal studies and other biological effects research relating to effects of air pollution on man.
   - C. Effects – Animal, Plant, and General Environment
     Studies of air pollution effects on livestock, vegetation, crops, materials, and structures. Includes deterioration, corrosion, and other deleterious effects.
   - D. Economic Aspects
     Includes losses from pollution damage and costs of control programs.
   - E. Legal, Administrative, and Social Aspects
     Air quality research concerned with standards, management, social attitudes, legislation, and related subject areas.
   - F. Control Methods
     Equipment, abatement, and operations relating to air quality control.
   - G. Measurements
     Instrumentation, air pollution monitoring, and identification of pollution sources.
   - H. Basic Research
     Basic chemical and physical properties of pollutants. Theoretical and laboratory studies concerned with air pollutant formation, identity, and effects.
2. Water Quality
   - A. Sources of Pollution
     Projects concerned primarily with the origin of a water pollutant (e.g., eutrophication, environmental cycling, runoff-erosion-sedimentation). Includes unusual pollutant sources or special interest sources (e.g., oil spills, trace element pollution, rain-atmospheric washout, radioactive fallout, dredging).
   - B. Pollution Identification
     Measurement, monitoring, bioassay, bioindicators, and instrumentation. Includes ecological baseline studies, prediction and forecasting of water pollution potential.
   - C. Water Treatment
     Physical management or treatment applied to poor quality water before utilization. Includes chlorination for potable water and related sanitation measures.
   - D. Water Management and Pollutant Dispersal
     Dispersal of effluents, hydrologic mixing, disposal on soil waste fields, dilution of pollutants, assimilative capacity, ocean dispersion, self-purification. Includes management of polluted natural waters to improve quality.
